Total ARR

1,009,600

Avg 8,275 across 122 active Customers

Win Rate

63%

60 of the 96 decided deals were won (334 deals are still in progress)

New Customers (Latest Month)

3

▼ 80.0% from last month

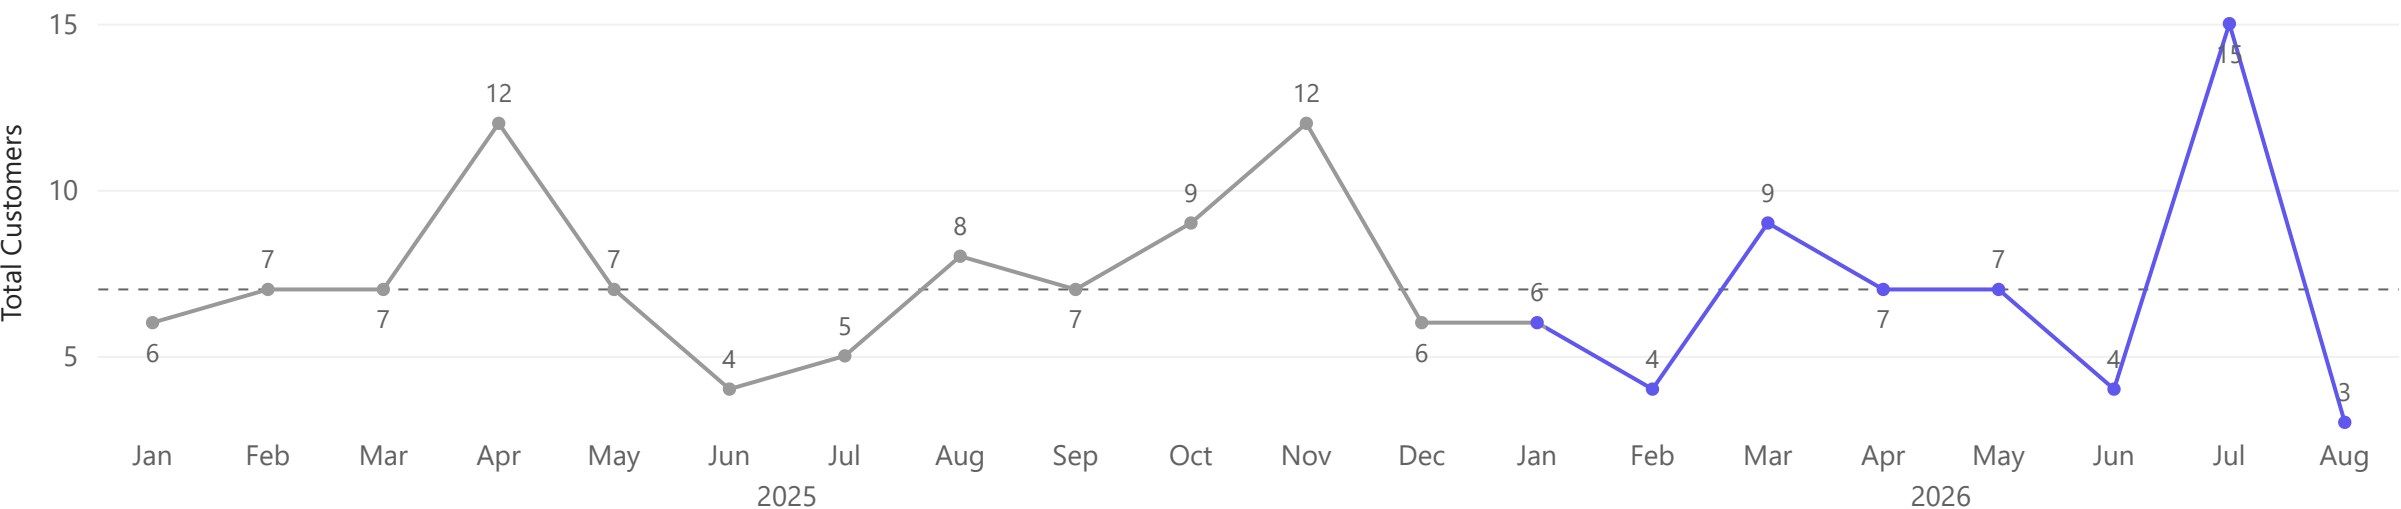

Open Pipeline Value

7,910,300

334 deals still open, Averaging 23,684 each

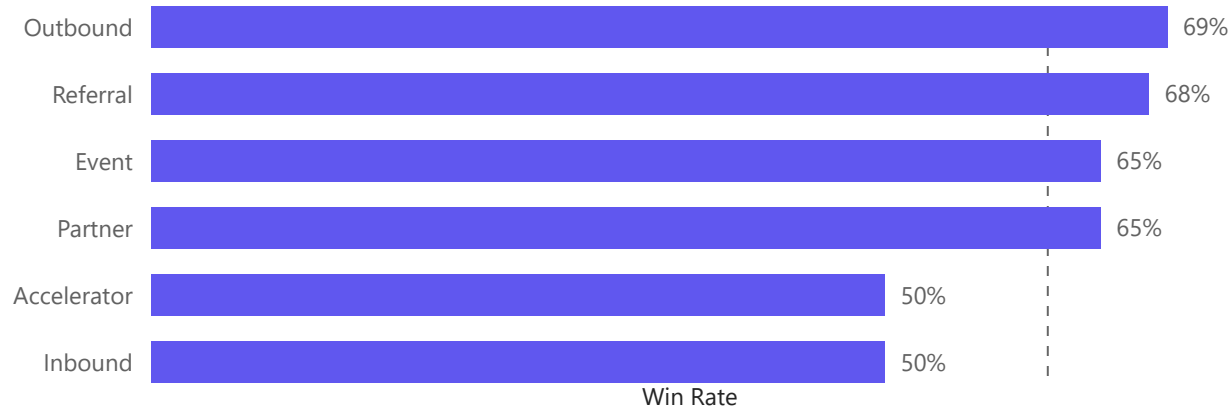

Customer Growth

Signups swing month to month usually in single digits, with occasional jumps to 12–15

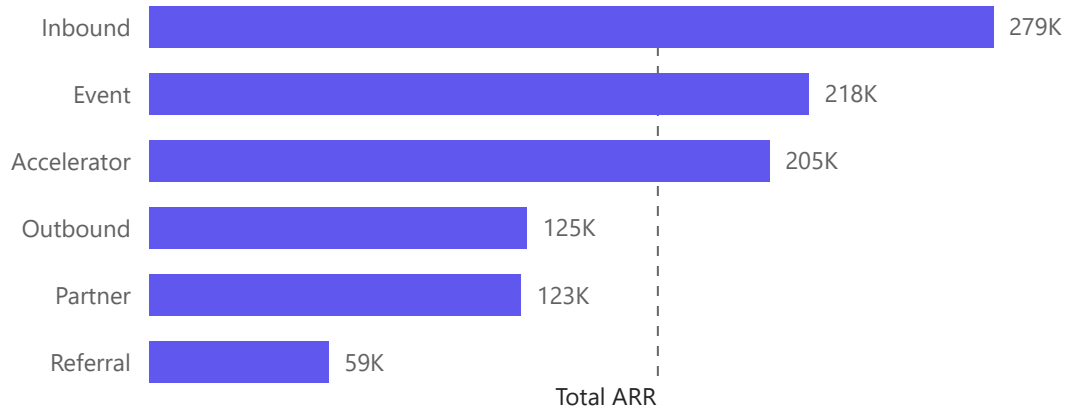

Win Rate by Lead Source

Outbound and Referral close deals most often (69%, 68%). Inbound and Accelerator lag well behind at 50%

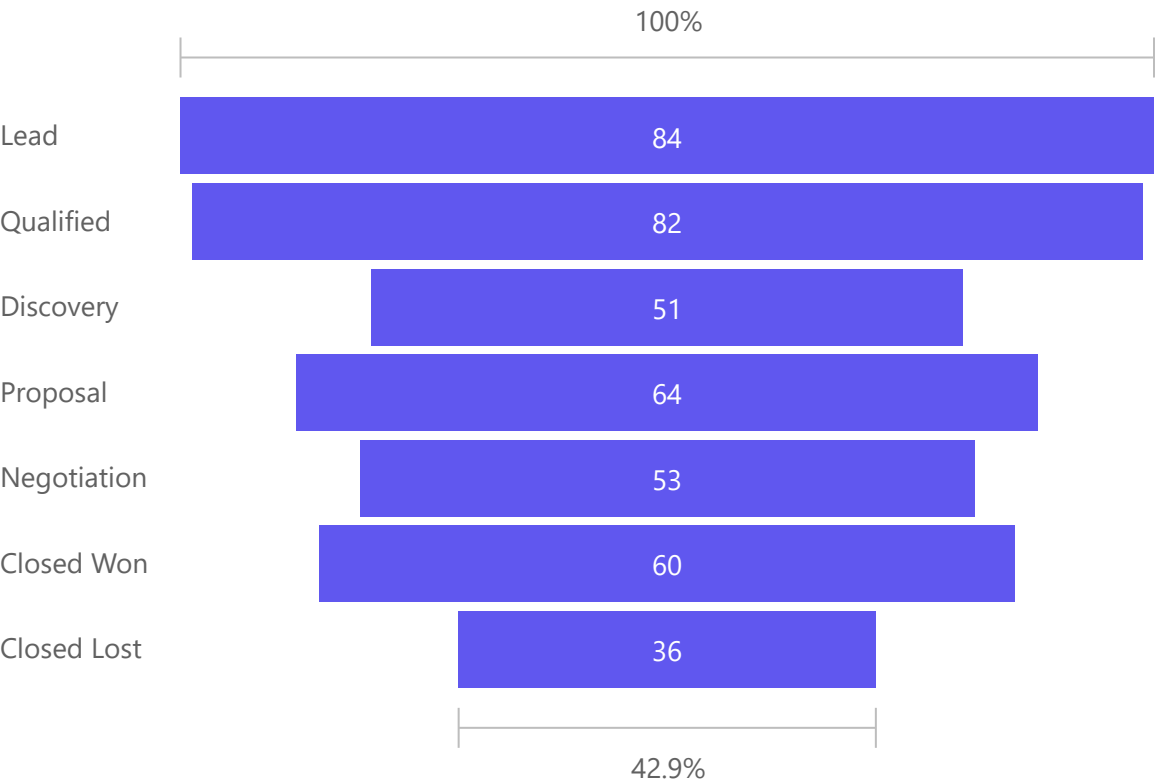

ARR by Acquisition Source

Inbound and Accelerator convert less often (50%) but land bigger deals when they do, Inbound alone brings in 279K, the most of any channel

Sales Pipeline by Stage

Most leads (84) are still brand new. Of the 96 that reached a decision, 60 were won and 36 lost

Revenue vs. Hardware Spend

Plan	Average Revenue per Active Customer	Avg Order Value
Growth	9,044.79	15,202.34
Starter	5,597.11	14,596.86
Enterprise	11,157.93	13,917.84

Enterprise customers pay about 2x what Starter customers pay a year (\$11,158 vs \$5,597), but they don't order more hardware. All three tiers spend around \$14-15K per order on average. **Plan tier alone isn't a good signal for predicting order size**

Active Customers

122

122 Active, 16 Churned, 7 Paused

Churn Rate

11%

16 of 145 total customers have churned

Order Count

716

▲ 20.7% from last month

Avg Order Value

14,657.02

Median order value is \$4,275, a few bulk orders pull the average higher

Avg Fulfilment Days

7 days

Based on 573 delivered orders

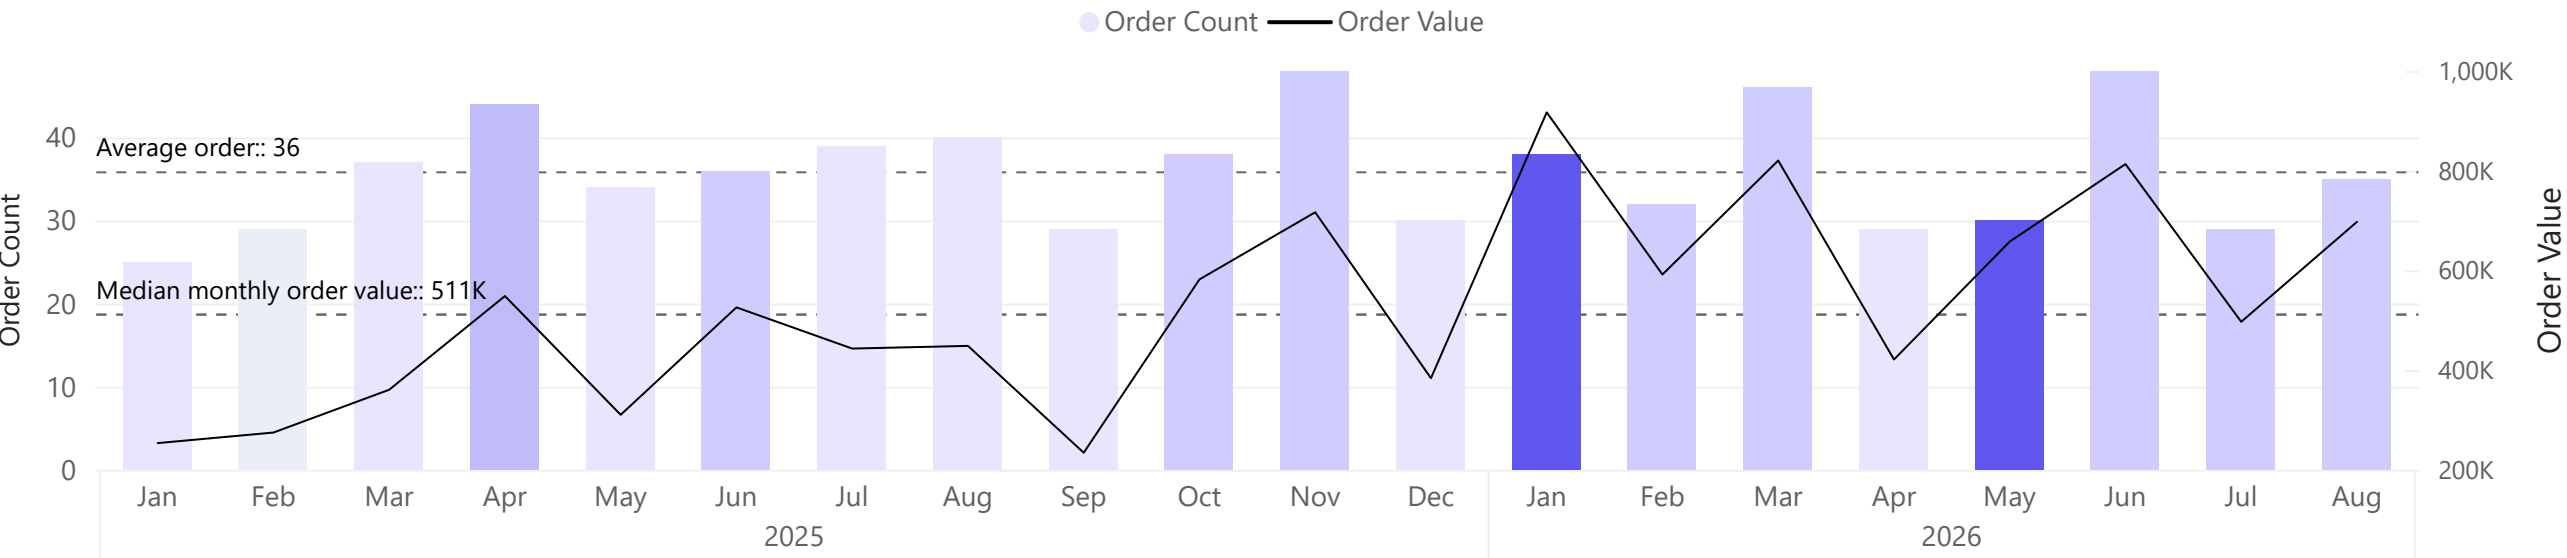

Fail Cancel Rate

12%

88 of 716 orders never completed

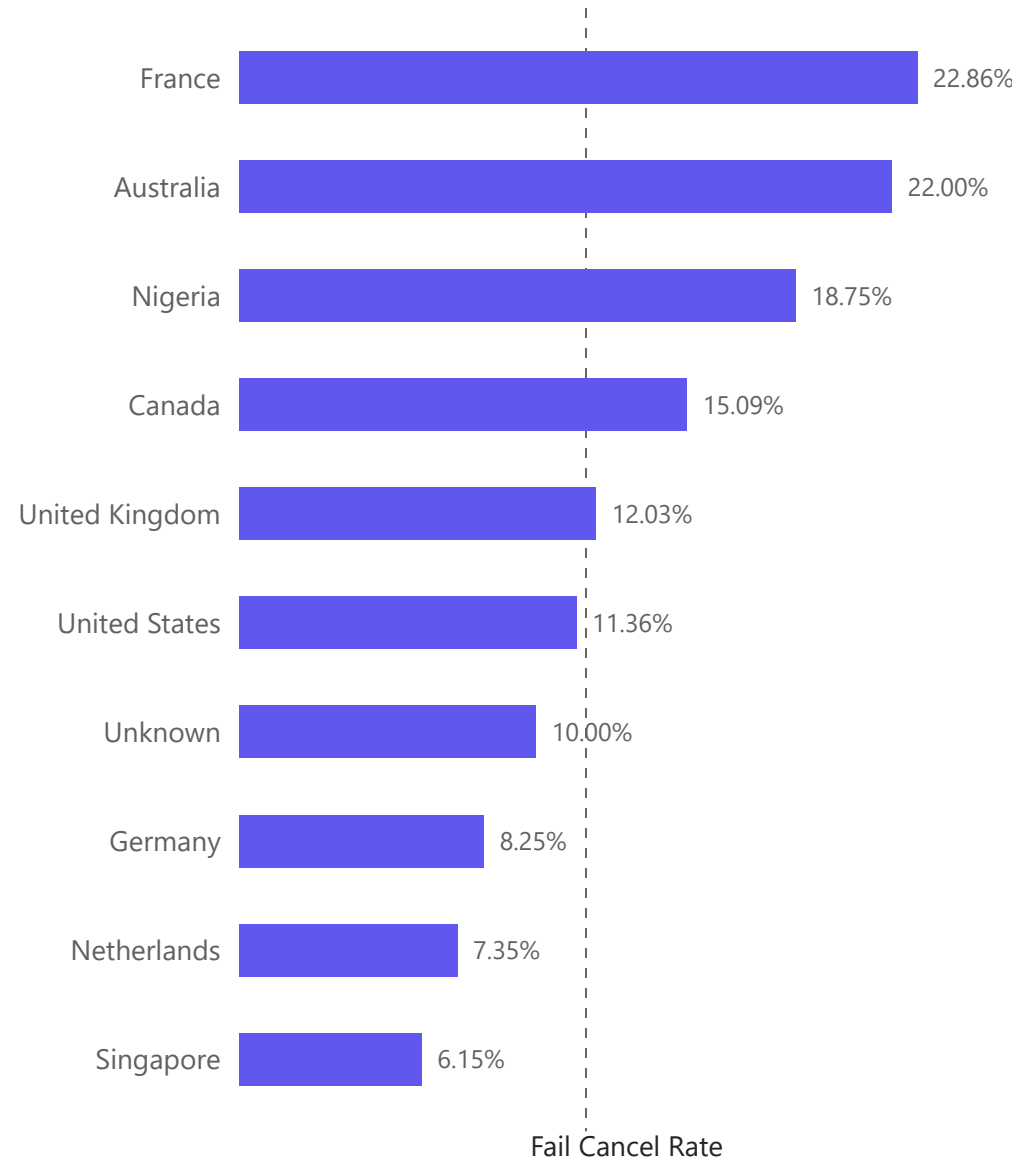

Orders & Order Value by Month

25 to 48 orders a month. Value spikes don't line up with order count, they're driven by occasional big bulk orders

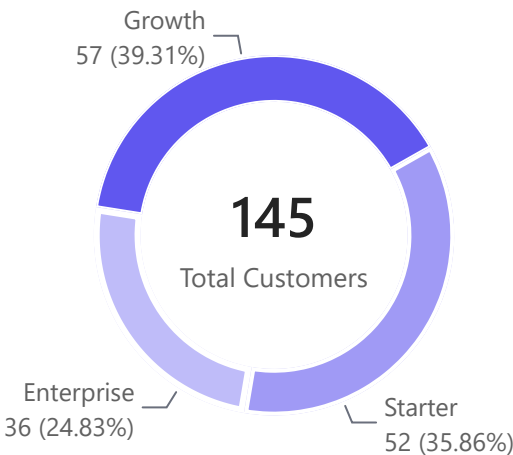

Fail/Cancel Rate by Country

France and Australia fail or cancel roughly 1 in 5 orders. Worth checking vendor coverage or shipping times there before expanding further in these markets

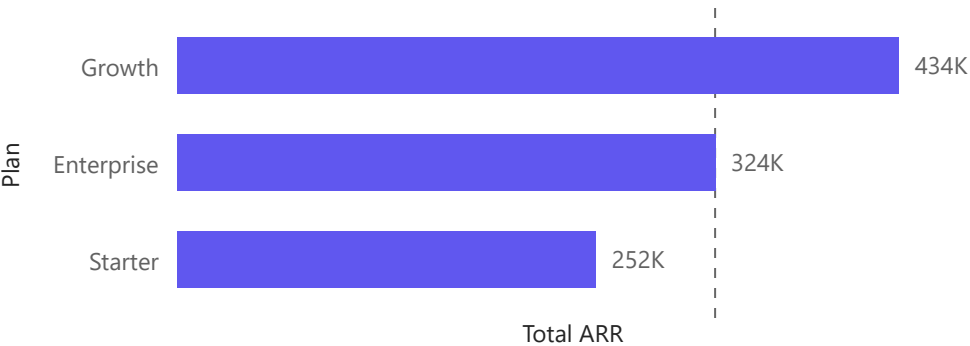

Customers by Plan Tier

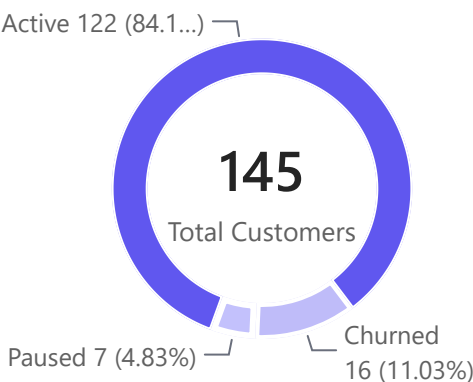

ARR by Plan Tier

Growth contributes the most total ARR (\$434K), not because it pays more per customer, but because it has more customers (57) than Enterprise (36)

Customer Status Mix

122 Active (84%), 16 Churned (11%), 7 Paused (5%)

Total Active Users
96,743

▲ 5.7% from July

Treatment Adoption Rate
53%

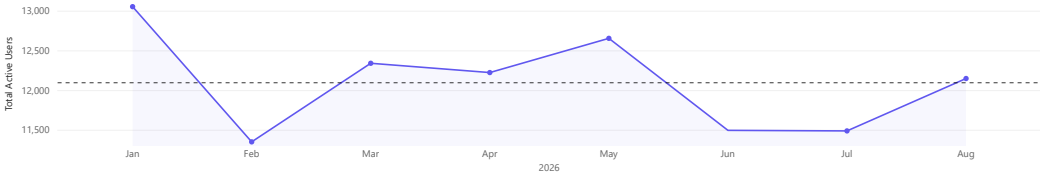

vs 25% in Control

Weekly Actions Lift (Treatment)
57%

Control changed -2.8% over the same period

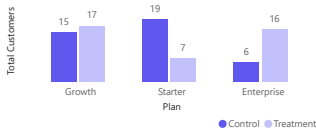

Active Users Trend

Fairly steady month to month, dips briefly in February and June/July, picks back up in August

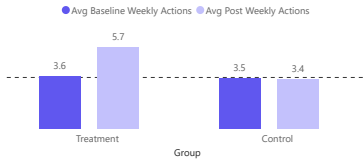

Who ended up in which group

They weren't matched fairly. The Treatment group had more big (Enterprise) customers in it, and the Control group had more small (Starter) customers

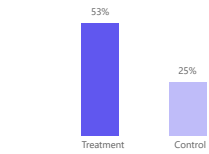

Baseline vs. Post Actions

Treatment customers nearly doubled their weekly actions (3.6 → 5.7); Control barely changed (3.5 → 3.4)

Adoption Rate

Roughly half of Treatment customers adopted the new feature, about double Control's rate

Treatment and Control aren't evenly split by plan tier (Control skews Starter, Treatment skews Enterprise), so some of this lift may reflect plan mix rather than the feature itself.

Active Users by Feature

IT Support and Employee Offboarding get the most use; Device Fleet the least, though all seven features stay in a similar range
